Balloon Flight - little piggy @ 100,000 feet = flat horizon

Nature of lens - horizon at top shows curve of earth, at middle shows flat earth, at bottom shows concave earth. The horizon "takes the shape of the lens." The lens is curved at top like the top of a ball so the horizon showing thru the top of the lens looks curved like the top of a globe. But the bottom of the lens is curved upside down, so the horizon showing thru this section of the lens makes the horizon look concaved. The middle of the lens is the only place that is most accurate and shows a flat horizon.
